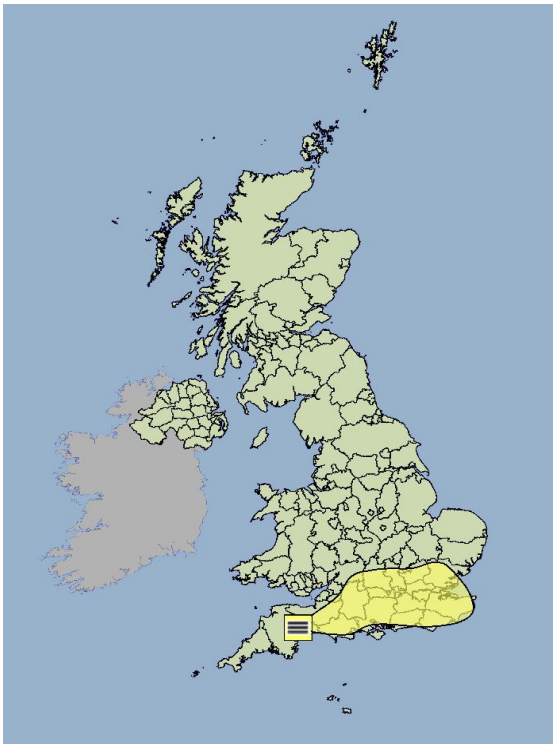
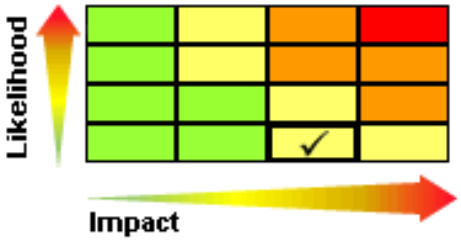
National Severe Weather Warning Service





Chief Forecasters Assessment
As the cold airmass across much of the south of England moistens up, there will be a much greater risk of fog than on recent nights. Areas of cloud trying to advance from the west will add to the uncertainty in extent of fog later in the night and through Monday morning.

The Met Office have issued a **Yellow Warning** of **Fog**

Valid from **01:00 on Mon, 23rd Jan 2017** until **10:30 on Mon, 23rd Jan 2017**

Areas of fog are likely to start to form in places during Sunday evening but the main problems would appear to be more likely later tonight and through the Monday morning rush hour. By this stage, the western part of the warning area may be seeing improving visiiblities.

Areas of dense and freezing fog may lead to journeys taking longer than usual, with possible delays to air travel. Watch out, too, for slippery surfaces.
